Euonymus alatus (Celastraceae) has been used as an anticancer agent in Korean traditional medicine. However, the potential bioactive contributors to the anticancer effects have not been thoroughly studied. Our screening test revealed that the MeOH extract of *E. alatus* twigs exhibited significant cytotoxicity against A549, SK-OV-3, and SK-MEL-2 cell lines. A bioassay-guided separation of the MeOH extract of *E. alatus* twigs resulted in the isolation and identification of 14 triterpenes as main phytochemicals. The structures of the compounds were elucidated on the basis of spectroscopic evidence as lupeol (1), betulin (2), 3 β ,28,30-lup-20(29)-ene triol (3), lupenone (4), betulone (5), 28,30-dihydroxy-3-oxolup-20(29)-ene (6), messagenin (7), glut-5-en-3 β -ol (8), maslinic acid (9), hederagenin (10), 3-oxo-11 α -methoxyolean-12-ene (11), 3 β -hydroxy-1-oxo-olean-12-en-28-oic acid (12), ursolic acid (13), and 2 α -hydroxy-ursolic acid (14). Of these compounds, 3, 6-8, and 10-14 were isolated for the first time from this plant. All isolated triterpenoids had consistent antiproliferative activities against A549, SK-OV-3, SK-MEL-2, and HCT-15 cell lines. Compounds 2, 5, and 7 showed significant cytotoxicity against all four cell lines tested, with IC₅₀ values of 3.26-8.61 μ M.

Keywords: *Euonymus alatus*, Celastraceae, Triterpenoid, Antiproliferation, Structure-activity relationships.

Triterpenoids represent a large and diverse group of organic compounds characterized by the basic backbone of a 30-carbon isoprenoid molecule, and are ubiquitously distributed throughout the plant kingdom [1]. Because of the growing importance of triterpenoids as a source of therapeutic medications for various chronic diseases, there have been many studies investigating the potential biological activities and possible molecular targets of natural triterpenoids as well as synthetic triterpenoids [2-5]. Recent experimental evidence supports the beneficial effects of triterpenoids as potential agents for the prevention and treatment of various types of cancer [5,6]. There is also convincing evidence in experimental animal models demonstrating the anti-carcinogenic effects of triterpenoids against several cancer types, mainly by modulating the pathways that contribute to cell proliferation and apoptosis [5,6].

Euonymus alatus (Thunb.) Sieb. (Celastraceae) is a deciduous and popular ornamental tree that is commonly known as winged euonymus. The cork cambium on the twigs of this tree, which is called 'gui-jun woo', has long been used to treat cancers in Korean traditional medicine [7]. Recently, pharmacological studies have supported the potential of *E. alatus* as an anticancer agent using a variety of bioactive evaluations *in vivo* and *in vitro* models [8-10]. Known bioactive constituents of *E. alatus*, including sesquiterpenes, sesquiterpene alkaloids, triterpenes, flavonoids, and phenolic compounds have been reported [11-15]. However, to the best of our knowledge, the bioactive compounds that contribute to its anticancer effects have not been completely studied.

The MeOH extract of *E. alatus* twigs showed significant cytotoxicity against A549, SK-OV-3, and SK-MEL-2 cell lines based on the results of a sulforhodamine B (SRB) bioassay [16,17].

Figure 1: Chemical structures of the isolated triterpenoids 1-14.

As part of a search for the antiproliferative constituents from the twigs of *E. alatus*, we previously reported on the isolation and identification of five new phenolic compounds with cytotoxicity as well as anti-neuroinflammatory activity [16]. In the course of our continuing search for anticancer compounds from *E. alatus* twigs, we further investigated the active constituents of its MeOH extract based on a bioactivity-guided isolation principle. In the present

research, we report the isolation and structural elucidation of 14 triterpenes (**1-14**) from the active CHCl₃-soluble fraction as the main phytochemicals (Figure 1). The SRB bioassay was performed to evaluate the antiproliferative activities of compounds **1-14** by determining their inhibitory effects on human tumor cell lines A549, SK-OV-3, SK-MEL-2, and HCT-15. In addition, the structure-activity relationships (SAR) of the isolated triterpenoids on the antiproliferative effects were addressed in this study.

Based on the bioactivity-guided isolation principle, the methanolic crude extract of *E. alatus* twigs was fractionated to yield soluble fractions of *n*-hexane, CHCl₃, *n*-BuOH, and water. As shown in Table 1, the crude MeOH extract displayed significant cytotoxicity against A549, SK-OV-3, and SK-MEL-2 cells, with IC₅₀ values of 8.2, 6.6, and 8.4 μg/mL, respectively. Among the derived soluble fractions, the *n*-hexane and CHCl₃ soluble fractions had cytotoxicity against A549, SK-OV-3, and SK-MEL-2 cells, while the *n*-BuOH and water soluble fractions were inactive (IC₅₀: >50.0 μg/mL) (Table 1). The cytotoxic effect of the CHCl₃ soluble fraction (IC₅₀ value of 8.1-8.6 μg/mL) was higher than that of the *n*-hexane soluble fraction (IC₅₀ value of 24.6-27.0 μg/mL), which led us to investigate the CHCl₃ soluble fraction for active compounds. Further fractionation of the CHCl₃ soluble fraction using column chromatography revealed that its derived fractions A1, A2, A3, and A4 showed considerable cytotoxic activity against the tested cell lines (Table 1). The active fractions A1, A2, and A3 were consolidated, and the combined fraction was applied to RP-C₁₈ silica gel column chromatography, which further afforded seven active fractions; B1, B9, B10, and B12-B15 (Table 1). Fraction A4 was subjected to a Sephadex LH-20 column, which provided additionally three active fractions; C3, C4, and C5. Semi-preparative HPLC purification of the active fraction B1 yielded a lupane-type triterpene **4** and an oleanane-type triterpene **11**. Similarly, the active fraction B9 afforded two lupane-type triterpenes **3** and **7**, and a lupane-type triterpene **6** was isolated from the active fraction B10; an oleanane-type triterpene **8** from the active fraction B12; a lupane-type triterpene **5** from the active fraction B13; a lupane-type triterpene **2** from the active fraction B14; a lupane-type triterpene **1** and an ursane-type triterpene **13** from the active fraction B15. Finally, three oleanane-type triterpenes **9**, **10**, and **12** and an ursane-type triterpene **14** were obtained from the consolidated fractions C3, C4, and C5. The structures of the isolated triterpenoids **1-14** were unambiguously confirmed by spectroscopic methods, including ¹H NMR, ¹³C NMR, 2D NMR, and MS analysis. The compounds were identified as lupeol (**1**) [18], betulin (**2**) [19], 3β,28,30-lup-20(29)-ene triol (**3**) [20], lupenone (**4**) [21], betulone (**5**) [22], 28,30-dihydroxy-3-oxolup-20(29)-ene (**6**) [23], messagenin (**7**) [24], glut-5-en-3β-ol (**8**) [25], maslinic acid (**9**) [26], hederagenin (**10**) [27], 3-oxo-11α-methoxyolean-12-ene (**11**) [28], 3β-hydroxy-1-oxo-olean-12-en-28-oic acid (**12**) [29], ursolic acid (**13**) [30], and 2α-hydroxyursolic acid (**14**) [26] by comparing their obtained spectroscopic data with previously reported values. To the best of our knowledge, compounds **3**, **6-8**, and **10-14** were isolated for the first time from this plant.

The sulforhodamine B cell proliferation assay was used to evaluate the antiproliferative activities of the isolated triterpenes **1-14** [17], which were tested against four human tumor cell lines, including A549 (non-small cell lung carcinoma), SK-OV-3 (ovary malignant ascites), SK-MEL-2 (skin melanoma), and HCT-15 (colon adenocarcinoma). The IC₅₀ (the concentration that causing 50% inhibition of cell proliferation) values of each compound were determined and are summarized in Table 2. The data demonstrated that all isolated triterpenoids displayed consistent antiproliferative activities against all of the cell lines with IC₅₀ values ranging from

Table 1: Cytotoxicity of the methanolic extract and its derived soluble fractions from *E. alatus* twigs against three human cancer cell lines.

Three types of triterpenoids, including lupane-type (**1-7**), oleanane-type (**8-12**), and ursane-type (**13-14**) triterpenoids were tested for their antiproliferative activities. It is interesting to note that the order of average cytotoxicity of the isolated triterpenoids from high to low can be listed as lupane-type > ursane-type > oleanane-type. Even though all the active triterpenes showed broad spectrum activity, compounds **2**, **5**, and **7** with a hydroxyl group at C-28 demonstrated the most significant cytotoxicity against all four cell lines tested. Other lupane-type triterpenes showed moderate antiproliferative activities. These results suggest that the presence of the hydroxyl group at C-28 on lupane-type triterpenoids seems to be necessary to exert a good antiproliferative activity. However, the presence of the hydroxyl group at C-30 on lupane-type triterpenoids might not always increase cytotoxic activity. New information about structure-activity relationship was obtained by comparing cytotoxicity of **1** with **4**, **2** with **5**, and **3** with **6**, in which paired compounds have the same skeleton. This led to the information that the existence of a ketone group at C-3 on lupane-type triterpenoids induced cytotoxicity slightly more effectively than the existence of

a hydroxyl group at C-3. This may be associated with lipophilicity, and a higher lipophilicity may facilitate penetration through the lipophilic plasma membrane of the tumor cells, and subsequently, to a higher cytotoxicity [31]. On the other hand, oleanane-type triterpenes **8** and **11** showed selective cytotoxic effects against A549 weakly, while other compounds **9**, **10**, and **12** showed high cytotoxic activity against all of the tested cell lines. This led us to conclude that the presence of a carboxyl group at C-28 is essential for the cytotoxic activity of the oleanane-type triterpenes. The ursane-type triterpenes **13** and **14** exhibited moderate antiproliferative activities against four human tumor cell lines.

In the present study, the MeOH extract of *E. alatus* twigs was investigated to explore its antiproliferative constituents. All of the isolated triterpenes showed significant antiproliferative activity against A549, SK-OV-3, SK-MEL-2, and HCT-15 cell lines, which confirmed that the isolated triterpenoids represented a portion of the molecules associated with anticancer effects of *E. alatus*. In conclusion, our results strongly suggest that the MeOH extract of *E. alatus* twigs is a potential source of anticancer health products, which supports the ethnopharmacological use of *E. alatus* in Korean traditional medicine to treat various cancers.

Experimental

General experimental procedures: Optical rotations were measured on a Jasco P-1020 Polarimeter, IR spectra on a Bruker IFS-66/S FT-IR spectrometer, UV spectra on a Shimadzu UV-1601 UV-Visible spectrophotometer, and ESI mass spectra on an Applied Biosystems Mariner time-of-flight mass spectrometer with an electrospray interface. NMR spectra were recorded on a Varian UNITY INOVA 500 NMR spectrometer operating at 500 MHz (^1H) and 125 MHz (^{13}C), with chemical shifts given in ppm (δ). Semi-preparative high-performance liquid chromatography (HPLC) was performed using a Gilson 306 pump with a Shodex refractive index detector. Silica gel 60 (Merck, 230-400 mesh) and RP-C₁₈ silica gel (Merck, 230-400 mesh) were used for column chromatography (CC). The packing material for molecular sieve column chromatography was Sephadex LH-20. Merck precoated silica gel F₂₅₄ and RP-18 F_{254s} plates were used for thin layer chromatography (TLC). Compounds were detected on TLC either under UV light or by heating after spraying with anisaldehyde-sulfuric acid.

Plant material: *E. alatus* twigs were collected from Chungju, Chungcheongbuk-do, Korea, in March 2010. Samples of plant material were identified by one of the authors (K.R. Lee). A voucher specimen (SKKU 2010-3) has been deposited in the herbarium of the School of Pharmacy, Sungkyunkwan University, Suwon, Korea.

Extraction and isolation: The finely chopped plant material (5.2 kg) was extracted with 80% aqueous MeOH two times (each 20 L \times 4 h) under reflux and filtered. The filtrate was evaporated under vacuum to obtain a crude MeOH extract (220 g), which was suspended in distilled water (3.6 L) and then successively solvent-partitioned with *n*-hexane, CHCl₃, and *n*-BuOH, yielding 31, 11, and 35 g of residue, respectively. Each fraction was evaluated for cytotoxic activity against human tumor cell lines, A549, SK-OV-3, and SK-MEL-2 using the SRB bioassay [17].

The CHCl₃-soluble fraction (11 g) was separated by silica gel (230-400 mesh) CC [500 g, 5 \times 55 cm, eluted with CHCl₃-MeOH, 20:1

(1.5 L), 10:1 (1.5 L), and 1:1 (1.0 L)] to give 7 fractions (A1 – A7). Fractions A1, A2, and A3 were consolidated on the basis of TLC analysis, and the combined fraction (2.3 g) was applied to RP-C₁₈ silica gel (230-400 mesh, 150 g) CC using a gradient solvent system of MeOH-H₂O (1:1 – 4:1 – 1:0) to give 16 sub-fractions (B1 – B16). Sub-fraction B1 (150 mg) was applied to a Sephadex LH-20 column using a solvent system of CH₂Cl₂-MeOH (1:1) to give 5 fractions (B1-1 – B1-5). Fraction B1-5 (45 mg) was purified by semi-preparative reversed-phase HPLC with a solvent system of MeOH-H₂O (97:3, 700 mL, flow rate; 2 mL/min) to yield compounds **4** (5 mg, t_R 16.5 min) and **11** (6 mg, t_R 23.0 min). Sub-fraction B9 (78 mg) was purified by semi-preparative normal-phase HPLC using a solvent system of CHCl₃-MeOH (45:1, 500 mL, flow rate; 2 mL/min) to give compounds **3** (13 mg, t_R 15.3 min) and **7** (5 mg, t_R 12.1 min). Sub-fraction B10 (40 mg) was also separated by HPLC purification with a solvent system of CHCl₃-MeOH (45:1, 500 mL, flow rate; 2 mL/min) to afford compound **6** (15 mg, t_R 13.0 min). Sub-fraction B12 (25 mg) was purified by semi-preparative normal-phase HPLC with a solvent system of CHCl₃-MeOH (40:1, 500 mL, flow rate; 2 mL/min) to obtain compound **8** (4 mg, t_R 11.5 min). Sub-fraction B13 (350 mg) was applied to a Sephadex LH-20 column with a solvent system of CH₂Cl₂-MeOH (1:1) to give 6 fractions (B13-1 – B13-6). Fractions B13-4 and B13-5 were consolidated, and the combined fraction (24 mg) was purified by semi-preparative normal-phase HPLC using *n*-hexane-EtOAc (4:1, 800 mL, flow rate; 2 mL/min) to yield compound **5** (5 mg, t_R 17.6 min). Sub-fraction B14 (300 mg) was applied to a Sephadex LH-20 column using CH₂Cl₂-MeOH (1:1) to furnish 5 fractions (B14-1 – B14-5). Fractions B14-3 and B14-4 were combined, and the combined fraction (47 mg) was purified by semi-preparative normal-phase HPLC using *n*-hexane-EtOAc (3:1, 800 mL, flow rate; 2 mL/min) to give compound **2** (10 mg, t_R 15.0 min). Fraction B15 (540 mg) was subjected to a Sephadex LH-20 column using CH₂Cl₂-MeOH (1:1) to obtain compound **1** (10 mg) and 3 fractions (B15-1 – B15-3). Fraction B15-2 (15 mg) was purified by semi-preparative reversed-phase HPLC using MeOH-H₂O (98:2, 700 mL, flow rate; 2 mL/min) to give compound **13** (8 mg, t_R 17.3 min). Fraction A4 (1.2 g) was applied to a Sephadex LH-20 column with a solvent system of CH₂Cl₂-MeOH (1:1) to give 5 sub-fractions (C1 – C5). Sub-fractions C3, C4, and C5 were consolidated, and the combined fraction (640 mg) was applied to silica gel (230-400 mesh, 80 g) CC using a solvent system of CHCl₃-MeOH (25:1) to yield 8 fractions (C3-1 – C3-8). Fractions C3-5, C3-6, and C3-7 were combined, and the combined fraction (65 mg) was purified by semi-preparative reversed-phase HPLC with a solvent system of MeOH-H₂O (93:7, 700 mL, flow rate; 2 mL/min) to afford compounds **9** (6 mg, t_R 17.5 min) and **14** (5 mg, t_R 18.3 min). Finally, fraction C3-8 (150 mg) was filtered with a solvent system of MeOH-H₂O (1:1), and the remaining residue (35 mg) was purified by HPLC with a solvent system of MeOH-H₂O (93:7, 700 mL, flow rate; 2 mL/min) to give compounds **10** (4 mg, t_R 15.0 min) and **12** (4 mg, t_R 18.5 min).

Supplementary data: Physico-chemical properties and ^{13}C NMR data of compounds **1-14** and bioassay protocol are available in electronic form on the publisher's website.

Volatile Constituents from the Flowers of <i>Spathodea campanulata</i> from the Venezuelan Andes Silvana Villarreal, Deisy Jaimez, Sindy Moreno, Luis B. Rojas, Alfredo Usubillaga and María Rodríguez	1999
Composition and Variability of the Essential Oil of the Flowers of <i>Lavandula stoechas</i> from Various Geographical Sources Salvatore La Bella, Teresa Tuttolomondo, Giacomo Dugo, Giuseppe Ruberto, Claudio Leto, Edoardo M. Napoli, Angela Giorgia Potorti, Maria Rita Fedè, Giuseppe Virga, Raffaele Leone, Eleonora D'Anna and Mario Licata	2001
Antioxidant and Anti-inflammatory Activities of Essential Oil and Extracts of <i>Piper miniatum</i> Wan Mohd Nuzul Hakimi Wan Salleh, Mohd Fariz Kammil, Farediah Ahmad and Hasnah Mohd Sirat	2005
Potential Skin Regeneration Activity and Chemical Composition of Absolute from <i>Pueraria thunbergiana</i> Flower Do-Yoon Kim, Kyung-Jong Won, Dae-Il Hwang, Seok Won Yoon, Su Jin Lee, Joo-Hoon Park, Myeong Sik Yoon, Bokyung Kim and Hwan Myung Lee	2009
Composition, <i>in vitro</i> Cytotoxicity, and Anti-mildew Activities of the Leaf Essential Oil of <i>Machilus thunbergii</i> from Taiwan Yu-Chang Su, Kuan-Ping Hsu, Shu-Ching Li and Chen-Lung Ho	2013

Original Paper

Spasmolytic Activity of Carvone and Limonene Enantiomers Damião Pergentino de Sousa, Rafael Ferreira Mesquita, Luciano Augusto de Araújo Ribeiro and Juliane Tolentino de Lima	1893
New Glycosides and Trypanocidal Metabolites from <i>Vangueria edulis</i> Shaymaa M. M. Mohamed, Khaled M. Elokely, Enaam Y. Bachkeet, Soad A. L. Bayoumi, Vincenzo Carnevale, Michael L. Klein, Stephen J. Cutler and Samir A. Ross	1897
Constituents of the Stem of <i>Nauclea orientalis</i> Phan Thi Anh Dao, Tran Le Quan and Nguyen Thi Thanh Mai	1901
Deodorane Isomers in <i>Cedrus atlantica</i> Essential Oils and Tar Oils Anne Marie Nam, Ange Bighelli, Mohamed Ghanmi, Badr Satrani, Joseph Casanova and Félix Tomi	1905
A New Trinor-guaiane Sesquiterpene from an Indonesian Soft Coral <i>Anthelia</i> sp. Novriyandi Hanif, Anggia Murni, Marie Yamauchi, Masahiro Higashi and Junichi Tanaka	1907
A New Cytotoxic Gymnomitrane Sesquiterpene from <i>Ganoderma lucidum</i> Fruiting Bodies Pham Thanh Binh, Dimitri Descoutures, Nguyen Hai Dang, Nguyen Phuong Dai Nguyen, and Nguyen Tien Dat	1911
A New Isocyanos sesquiterpene from the Nudibranch <i>Phyllidiella pustulosa</i> Takahiro Jomori, Takahiro Shibutani, Peni Ahmadi, Toshimasa Suzuka and Junichi Tanaka	1913
Antimicrobial Diterpenes from <i>Azorella</i> Species Against Gram-Positive Bacteria Viviana Donoso, Mitchell Bacho, Solange Núñez, Juana Roviroso, Aurelio San-Martín and Sergio Leiva	1915
A Novel Norclerodane Diterpenoid from the Roots of <i>Croton crassifolius</i> Zhan-Xin Zhang, Hui-Hong Li, Gai-Xia Fan, Zheng-Yu Li, Le-Le Dong, Hong-Yu Li and Dong-Qing Fei	1917
Production of Triterpenoid Sapogenins in Hairy Root Cultures of <i>Silene vulgaris</i> Yeon Bok Kim, Darwin W. Reed and Patrick S. Covelio	1919
Extraction and Isolation of Antineoplastic Pristimerin from <i>Mortonia greggii</i> (Celastraceae) Luis Alberto Mejía-Manzano, Bertha A. Barba-Dávila, Janet A. Gutierrez-Urbe, Edgardo J. Escalante-Vázquez and Sergio O. Serna-Saldívar	1923
Bioassay-guided Isolation of Antiproliferative Triterpenoids from <i>Euonymus alatus</i> Twigs Hee Rae Kang, Hee Jeong Eom, Seoung Rak Lee, Sang Un Choi, Ki Sung Kang, Kang Ro Lee and Ki Hyun Kim	1929
Two New Triterpenoidal Saponins from Roots of <i>Pachystela msolo</i> Roland N. Ache, Turibio K. Tabopda, Samuel O. Yeboah and Bonaventure T. Ngadjui	1933
The Influence on LPS-Induced ROS Formation in Macrophages of Capelloside A, a New Steroid Glycoside from the Starfish <i>Ogmaster capella</i> Natalia V. Ivanchina, Alla A. Kicha, Timofey V. Malyarenko, Anatoly I. Kalinovsky, Ekaterina S. Menchinskaya, Evgeny A. Pisyagin and Pavel S. Dmitrenok	1937
Steroidal Saponins from the Mesocarp of the Fruits of <i>Raphia farinifera</i> (Arecaceae) and their Cytotoxic Activity Léon A. Tapondjou, Kristina J. Siems, Stefan Böttger and Matthias F. Melzig	1941
Bromotyrosine Alkaloids with Acetylcholinesterase Inhibitory Activity from the Thai Sponge <i>Acanthodendrilla</i> sp. Natchanun Sirimangkalakitti, Opeyemi J. Olatunji, Kanokwan Changwichit, Tongchai Saesong, Supakarn Chamni, Pithi Chanvorachote, Kornkanok Ingkaninan, Anuchit Plubrukarn and Khanit Suwanborirux	1945
Ircinal E, a New Manzamine Derivative from the Indonesian Marine Sponge <i>Acanthostrongylophora ingens</i> Mousa Altarabeen, Georgios Daletos, Weaam Ebrahim, Werner E. G. Müller, Rudolf Hartmann, Wenhan Lin and Peter Proksch	1951
<i>Ruta graveolens</i> Extracts and Metabolites against <i>Spodoptera frugiperda</i> Benjamín A. Ayil-Gutiérrez, Jesús M. Villegas-Mendoza, Zuridai Santes-Hernández, Alma D. Paz-González, Maribel Mireles-Martínez, Ninfá M. Rosas-García and Gildardo Rivera	1955
A New Isoflavone Apioglucoiside from the Roots of <i>Dalbergia spinosa</i> Raja Radha, Vairathevar Sivasamy Vasantha and Kasi Pitchumani	1959
Antioxidant and α-Glucosidase Inhibitory Properties and Chemical Profiles of Moroccan Propolis Milena Popova, Badiaa Lyoussi, Smail Aazza, Dulce Antunes, Vassya Bankova and Graça Miguel	1961
A Novel Acylated Anthocyanin with a Linear Trisaccharide from Flowers of <i>Convolvulus althaeoides</i> Luis Cabrita	1965
Bioactive Xanthenes from <i>Cratoxylum cochinchinense</i> Achara Raksat, Tawanun Sripisut and Wisanu Maneerat	1969
A New 3'-Prenyloxy psoralen from the Raw Fruits of <i>Aegle marmelos</i> and its Cytotoxic Activity Widchaya Radchatawedchakoon, Suthep Bamrungsuk, Siriporn Namwijit, Nuttapon Apiratikul, Uthai Sakee and Boon-ek Yingyongnarongkul	1973
New Gallotannin and other Phytochemicals from Sycamore Maple (<i>Acer pseudoplatanus</i>) Leaves Lu Zhang, Zong-cai Tu, Tao Yuan, Hang Ma, Daniel B. Niesen, Hui Wang and Navindra P. Seeram	1977
Three New Chlorinated Cyclopentenols, Palmaenols A and B and Palmaetriol, from the Discomycete <i>Lachnum palmae</i> Yuka Tanabe, Takunori Matsumoto, Tsuyoshi Hosoya, Hiroshi Tomoda, Motoo Shiro and Hideyuki Shigemori	1981
Prebiotic Effects of <i>Agave salmiana</i> Fructans in <i>Lactobacillus acidophilus</i> and <i>Bifidobacterium lactis</i> Cultures Adriana Castro-Zavala, Bertha I. Juárez-Flores, Juan M. Pinos-Rodríguez, Rosa E. Delgado-Portales, Juan R. Aguirre-Rivera and Francisco Alcocer-Gouyonnet	1985
Synergy Effects of Three Plant Extracts on Protection of Gastric Mucosa Caihui Wang, Wen Su, Xingli Su, Guojun Ni, Tao Liu and Yi Kong	1989
<i>Aloe arborescens</i> Extract Protects IMR-32 Cells against Alzheimer Amyloid Beta Peptide via Inhibition of Radical Peroxide Production Maria Elisabetta Clementi, Giuseppe Tringali, Doriana Triggiani and Bruno Giardina	1993
Volatile Constituents of Three <i>Piper</i> Species from Vietnam Le D. Hieu, Tran M. Hoi, Tran D. Thang and Isiaka A. Ogunwande	1997

Contents

Re-Discovery of the Plant Kingdom as a Valuable Source of Novel Drugs (Guest Editor: Francesco Epifano)

Original Paper

- Antimicrobial Activity of *neo*-Clerodane Diterpenoids isolated from *Lamiaceae* Species against Pathogenic and Food Spoilage Microorganisms** 1797
Petko Bozov, Tania Girova, Natalia Prasadova, Yana Hristova and Velizar Gochev
- Study of an Acid-Free Technique for the Preparation of Glycyrrhetic Acid from Ammonium Glycyrrhizinate in Subcritical Water** 1801
Anna V. Lekar, Sergey N. Borisenko, Elena V. Vetrova, Olga V. Filonova, Elena V. Maksimenko, Nikolai I. Borisenko and Vladimir I. Minkin
- New Flavonol Glycoside from the Leaves of *Ventilago africana*** 1805
Diane Patricia Apie Gossan, Abdulmagid Alabdul Magid, Philomène Akoua Yao-Kouassi, Damien Le Faucheur, Antoine Ahibo Coffy, Dominique Harakat and Laurence Voutquenne-Nazabadioko
- Change in the Chemical Profile of *Mangifera indica* Leaves after their Metabolism in the *Tropidacris collaris* Grasshopper** 1809
Rodolfo R. da Silva, Marcilio M. Moraes, Claudio A. G. Camara and Clécio S. Ramos
- Complexes of Lapachol and Lawsonia with Lanthanides** 1811
Salvatore Genovese, Vito Alessandro Taddeo, Francesco Epifano and Serena Fiorito
- Synthesis of the Furan Nucleus Promoted by Ytterbium Triflate** 1813
Vito Alessandro Taddeo, Salvatore Genovese, Francesco Epifano and Serena Fiorito
- Analysis of Organic Acids, Deacetyl Asperulosidic Acid and Polyphenolic Compounds as a Potential Tool for Characterization of Noni (*Morinda citrifolia*) Products** 1817
Miroslava Bittová, Dita Hladůvková, Vendula Roblová, Stanislav Kráčmar, Petr Kubáň and Vlastimil Kubáň
- Antioxidant Activity and Polyphenol Content of Some Brazilian Medicinal Plants Exploiting the Formation of the Fe(II)/2,2'-bipyridine Complexes** 1821
Waila Evelyn Lima Santana, Cecilia Verônica Nunez and Horacio Dorigan Moya
- Reactive Nitrogen Species Scavenging Capacity of Aqueous and Ethanolic Extracts from *Galinsoga parviflora* and *G. quadriradiata* Herbs** 1825
Marta Rogowska, Siniša Srećec and Agnieszka Bazyłko
- Combination of Antioxidants from Different Sources Could Offer Synergistic Benefits: A Case Study of Tea and Ginger Blend** 1829
Solomon A. Makanjuola, Victor N. Enujiugha, Olufunmilayo S. Omoba and David M. Sanni
- Lipid Metabolites from the Mushroom *Meripilus giganteus*** 1833
Francesca Cateni, Tiziano Altieri, Marina Zacchigna, Giuseppe Procida, Jelena Zilič, Dušan Žigon and Angelo Cichelli
- HPLC Analysis, Antioxidant, Anti-inflammatory and Xanthine Oxidase Inhibitory Activity of *Cudrania tricuspidata*** 1839
Shivraj Hariram Nile and Doo Hwan Kim
- Renoprotective Effects, Protein Thiols and Liver Glycogen Content of Alloxan-induced Diabetic Rats Treated with Different Fractions of Heartwood of *Pterocarpus marsupium*** 1843
Vinutha Bhat and B Shivananda Nayak
- Medicinal Plants Used by a Mbyá-Guarani Tribe Against Infections: Activity on KPC-Producing Isolates and Biofilm-Forming Bacteria** 1847
Clara Lia Costa Brandelli, Vanessa Bley Ribeiro, Karine Rigon Zimmer, Afonso Luís Barth, Tiana Tasca and Alexandre José Macedo
- Chemistry and Pharmacognosy of the Genus *Durio*** 1853
Rudiyansyah, Kanda Panthong and Mary J Garson
- General Characteristics, Phytochemistry and Pharmacognosy of *Lippia sidoides*** 1861
Luiz Gustavo de L. Guimarães, Maria Laura M. da Silva, Paula Campos J. Reis, Maria Tereza R. Costa and Livia L. Alves
- Poplar-type Propolis: Chemical Composition, Botanical Origin and Biological Activity** 1869
Petar Ristivojević, Jelena Trifković, Filip Andrić and Dušanka Milojković-Opsenica
- Activities of Tannins – From *In Vitro* Studies to Clinical Trials** 1877
Elwira Sieniawska
- Organoselenium Compounds as Phytochemicals from the Natural Kingdom** 1885
Hanane Achibat, Nohad A AlOmari, Federica Messina, Luca Sancineto, Mostafa Khouili and Claudio Santi
